

Since it began operations, Sustaintech has been recognized for its pioneering work.

- 2009 “Best Business Plan” in the “Emerging Green Energy” category at Sankalp Intellectap
- 2009 New Ventures India Finalist
- Mentoring from Villgro Innovations Foundation

Sustaintech India Private Limited promotes the rapid adoption of sustainable energy technologies in rural and semi-urban areas. Through our business, we work to live up to a triple bottom line encompassing people, planet, and profits.

People: Our commitment to people is achieved through the positive health impact of our products. Because of improved technology, our cook stoves are smokeless, thereby reducing the incidence of respiratory illnesses. Our insulating technology provides a more comfortable environment for the cook and other street food vendor employees. Finally, while our products ensure fuel efficiency, our cook stoves are also compatible with multiple fuel sources such as firewood, charcoal, and loose biofuel, fuel types that our customers already use.

Planet: We focus our sustainable energy technologies on reducing deforestation and carbon emissions by ensuring our cook stoves save at least 40% fuel for our end consumers. Since we have made our technology to be as customer friendly as possible, we believe that our cook stoves will be adapted more widely, resulting in greater environmental benefits.

Profits: Our priority is not only our company’s success but also the sustained profits and growth of our customers. Since our target customer segment includes small business owners such as street food vendors and tea shop owners, we see our technology as a livelihood generation product that will help our customers grow their businesses and reduce fuel costs. We also ensure that our company can be profitable, allowing us to continue to serve our customers and grow to address the needs of new markets, leading to higher levels of impact for our customers and the environment.

Our PYRO Products **PYRO**
